Milestone 1 Report

Jack Brickl

11/4/2026

What I've Worked On

- Create database structure
- Add sample data
- Test CRUD statements
- Consult AI (ChatGPT) twice for structure and CRUD statements

What I should focus on

- Build a working prototype of the database with Java and JavaFX

What My Next Steps Are

- Create a connection between the database and Java in App.java
- (Do not hyperfocus on getting the database perfect yet)
- Connect 3-4 tables to App.java
- Create some prototype functions that let these tables interact with each other
- Create a bare-bones front end with the help of AI using JavaFX (not necessary, but can do this if there is time)
